### Abstract of JP 2003273890 (A)

**PROBLEM TO BE SOLVED:** To simplify a setting work for a system for easily acquiring the address of a terminal managing device necessary to register an own with the terminal managing device by means of a terminal.  
**SOLUTION:** A terminal-managing device address acquiring system previously sets the addresses of the terminal managing device with a network address aligning control server. A network address converter, disposed between the terminal and the terminal managing device receives the address of the managing device in addition to the network address, when the alignment of the network address is requested to the control server. The terminal receives the address of the managing device, in addition to the network address when the alignment of the network address is requested to the converter and acquires the address of the managing device.
